There are some broken outgoing links on your website. This may worsen user experience and signal to search engines that your site is neglected. So check the above table to see which of your links need fixing.

Note:

In some cases (especially with older and slower websites) your pages and resources may return 4xx and 5xx status code simply because the server was unable to handle the requests WebSite Auditor sent while crawling. To solve the problem and make sure the crawls do not overwhelm your server's bandwidth, please navigate to Preferences -> Crawler Settings -> Speed and reduce the number of requests per second.
